

ULTRA SHIELD BENEFITS

**50% LESS LABOR
70% LESS SUPPLIES**

- **Eliminate Dust from Burnishing**
 - UL Listed
- **Incredible Slip Resistance**
- **Increased Finish Durability**
 - Eliminate Stripping
- **Create a Beautiful Deep Gloss**
 - Contains NO Polymers
 - Eliminate all build up
- **Doubles the life of your floor finish**
 - **Safe and OSHA smart**
 - Non-Corrosive
 - Non-Hazardous

Using

Ultra **Shield**

For The First Time

***A SIMPLE GUIDE TO
GUARANTEED RESULTS***

RECOMMENDATIONS FOR USING ULTRA SHIELD

Things You'll Need

- Clean bucket and wringer.
- Wet Mop – Cotton and Nylon will both work well – Microfiber works great!
- Ultra high speed floor machine – 1500 rpm minimum.
Higher rpm = Better Shine.
- Floor pads: Select from any of the light-medium aggressive Natural Blend Hair pads.

Preparation and Application

Select a floor with a good floor finish base, 3-4 coats is optimal. The more finish, the better the result. (ULTRA SHIELD works equally well on all flooring types providing there is enough finish, VCT, Terrazzo, Marble, Pirelli, Ceramic, etc.) ULTRA SHIELD can be applied to the floor two ways. Dilute according to application preference:

1. Damp Mopping – Fill Mop bucket with 1 gallon of cold water. (If unsure of amount, use an empty gallon container to help measure.) – Squeeze ULTRA SHIELD bottle to fill the chamber with two (2) ounces of ULTRA SHIELD and pour into bucket.
2. Spray Bottle – Squeeze ULTRA SHIELD bottle to fill the chamber with one (1) ounce of ULTRA SHIELD and pour into spray bottle. Fill spray bottle to top with cold water.

Application Instructions

1. Damp Mopping: Wring out the mop well. ULTRA SHIELD should be applied to the floor a bit thinner than a coat of floor finish.
2. Spray Bottle: Slowly swing your arm from side to side spraying ULTRA SHIELD from the bottle in a stream (not a spray). Do not worry about applying ULTRA SHIELD evenly, the floor pad will spread the solution evenly over the floor when burnishing.

Burnishing Instructions

ULTRA SHIELD can be burnished Wet or Dry! When Damp Mopped, allow approximately 1 minute for ULTRA SHIELD to begin to dry and burnish while still damp for best results. When applied via spray bottle, begin burnishing immediately after ULTRA SHIELD has been applied to the floor. *Take your time when burnishing for the first few times for a stronger, deeper shine.

Make a date to come back and evaluate your new ULTRA SHIELD floor after the day's traffic – compare the ULTRA SHIELD results to your usual method with your existing product. The difference is ULTRA SHIELD!

Things to Look for While Using ULTRA SHIELD

- ULTRA SHIELD enhances the slip coefficient of the floor. Walk on the floor while it is wet and take note of how non-slip the floor appears.
- When dry, test the slip resistance of the floor Incredible.
- Make special note of the gloss. It's deep and water clear, not hazy like polymer based restorers.
- ULTRA SHIELD is the only Finish Enhancement product that eliminates the dust created from burnishing (even with propane).
- Remember to look at the bottom of the floor pad... There's no white ring, no build-up. The finish that's on the floor stays on the floor!
- Try ULTRA SHIELD on wood or brick. ULTRA SHIELD has the unique ability to remove the haze that forms on these surfaces.

Additional Uses for ULTRA SHIELD

Heavy Duty Scrubbing Solution

Dilute ULTRA SHIELD at 3-4 ounces to a gallon. Use this ULTRA SHIELD Dilution as a heavy duty scrubbing solution. Apply to the floor, allow ample dwell time. Scrub the floor with a Blue or Green cleaning/scrubbing pad to remove the top layer of finish or simply repair a badly worn floor. After scrubbing, remove solution, rinse with plain cold water and either apply a new coat of finish or apply ULTRA SHIELD and burnish. Follow the instructions on the previous page.

Everyday Mopping Solution

Dilute ULTRA SHIELD at a rate of 1/3-1/2 ounce per gallon. (1 ounce to 2-3 gallons). Use this solution for everyday mopping, even on days you don't burnish. Use this 1/3-1/2 ounce dilution for cleaning with automatic scrubbers. At this dilution, one bottle of ULTRA SHIELD makes an amazing 105 gallons of RTU cleaning solution.

We hope you enjoy using ULTRA SHIELD.
